EDIT: the activation is done by Football Manager, which I want to avoid having to enter every time, as I'm running it many time per day, and it takes long time to enter every time. A: There is a client side bug, that the activation key is not saved, if you close the application. So, you have to close the application and open it again for it to work, after that, it will ask for you license. Q: Why is instanceof deprecated? I'm currently reading Eric Raymond's "J2SE 5.0 Revisited" and I'm a bit puzzled by the instanceof operator. To me, it looks like it is a dangerous operator because: It's not clear what other classes/interfaces/subclasses are involved It doesn't work in some cases: java.lang.Number doesn't "cast" itself to Number[], but it seems to cast itself to Number It's not consistent, e.g. many classes don't implement the no-arguments constructor, so it will fail for them. From the same book, I see a more optimistic note of the instanceof operator: When used to determine type, it generally is safe, as long as the classes and interfaces you are testing are in the extended heap class hierarchy. However, the book only specifies what the spec says, not how it's used, so I'm quite interested in what experience others have with instanceof. A: It's a bit dangerous, because it could potentially lead to an infinite loop in some classes. The problem is that there are both Number and BigInteger and they both define a no-arg constructor, but they don't implement the same methods for the no-arg constructor. In order to tell which one the no-arg constructor is from, the method args.length is used (I don't think the ordering of the methods is guaranteed) and it is possible for the invoked instanceof method to get a reference to a constructor method that returns false. If this call returns false, then you've fallen into a "no-arg constructor, but not Number" or "Number but not no-arg constructor" loop. It could be written more explicitly in the spec, but then it would be harder to misread and it would lead to even more discussion. A: The instanceof operator is not deprecated, it f678ea9f9e
